

## Procedure to select the relevant MMT2020 FOSS document

This document explains how to select the relevant FOSS document from the list of documents in this portal.

### Step 1 (of 2):

Read the software version from the Infotainment Head Unit. Please follow below screen navigation steps to find software version:

### Step 2 (of 2):

To select the right FOSS document, compare the software version read from the head unit with the version number found in the title of FOSS documents using below explained procedure.

Format of software version number as read from head unit:

MMT - <<variant name>> - <<release version>> - <<build number>>  
(Example: MMT-ADV-Mid-X10.3-R20324A)

<<variant name >> can be **ADV-Mid** or **ADV-High** or **Starter**.

<<release version>> is alphanumeric. It can have **X** or **XP** or **Y** or **YP** as prefix. The **numeric part** is the section to be compared with version number seen in the title of FOSS files.

For instance, the figure in Step 1 has the below SW version as read from head unit:

**MMT-ADV-Mid-X10.3-R20324A**

Only the yellow highlighted numeric part needs to be compared with the version in FOSS files.

The relevant FOSS file for this example is:

**Free and Open Source Software Disclosure for MMT2020 X10.3.txt.**
